

# Job Description

**Job Title:** Assembly & Test Technician  
**Department:** Assembly & Test (Operations)  
**Reporting to:** Operations Manager

## Key Objectives:

Due to growth we are looking for an enthusiastic, pro-active and conscientious Assembly & Test Technician to work across both operations in a hands-on role in order to test the performance of our products before moving to assembly whilst complying with company requirements and specifications.

## Test Responsibilities:

- Day-to-day contribution to the running and maintenance of the MSCM test department and associated machinery.
- Understanding of route cards and procedures to follow and apply correct test application as per business requirements.
- Ability to read and understand engineering drawings.
- Assist with the performance of testing to the standard required by Company process / client requirements.
- Coupling build including test and flushing of each component.
- Undertaking patch sampling and analysis.
- Part marking of components.
- Interfacing of parts with applied pressure.
- Ensuring all parts undertake required test in safe manner adhering to all health and safety regulations.
- Operate test bay equipment to run tests under 'required' test conditions and parameters.
- Complete internal paperwork with accuracy.
- Use all machinery and equipment safely and respectfully, reporting any defects.

## Assembly Responsibilities:

- Day-to-day contribution to the running and maintenance of the MSCM assembly department and associated tools and machinery.
- Ability to read and understand engineering drawings.
- Assembly of various MSCM products in accordance to drawing, company process and customer requirements.
- Completion of assembly paperwork without error.
- Conduct all assembly work with due care and attention.

### **Experience & Knowledge:**

- Previous experience in similar position desired, however full training will be provided.
- Excellent attention to detail.
- The ability to work accurately under tight deadlines.
- Good verbal and written communicator.
- Ability to work unsupervised – self-motivated.
- Conversant with Microsoft Office.
- Team player & contributor.
- Forward thinking.
- Problem solver.
- Ability to adopt change and a flexible working approach.
- Open-minded and willing to constructively challenge things.
- Promote and maintain a safe working environment, report any accidents, near misses or safety concerns.
- Ability to manage risk daily.

### **Desirable:**

- Oil and Gas Industry experience.
- Experience of working in an engineering/manufacturing environment.
- Understanding of engineering design principles and practises; and the role of testing in product validation.

### **The Person**

To be successful in this role, you will need to have a strong desire to build a career in the Engineering industry. You will be a hard-working, adaptable team player with a strong work ethic and desire to learn. In return, you will be working and learning from experts in their fields with opportunity to grow and develop amongst the MSCM team.

We welcome applications from all levels, please feel free to apply if you have recently left school, college or university or if you have workplace experience.
